

We are currently seeking a student to undertake a study project associated with the AquaSol project. This study will involve creating tutorials and recorded video content for the software developed by our team.

Key points of the project include:

- Development of comprehensive tutorials for using our software.
- Production of video recordings to serve as visual guides.
- All materials must be prepared **in German**.

This project offers a unique opportunity to gain hands-on experience with our software that focus on the impact of solar panels on water related ecosystem services (ESS). Interested students are encouraged to send an email to moha.alqadi@tum.de
